Public Member Functions

`double`	**`add`** `(double a, double b) const`
	Adds two values.
`double`	**`multiply`** `(double a, double b) const`
	Multiplies two values.

Detailed Description

Performs basic arithmetic on floating-point numbers.

Definition at line 10 of file **calculator.cpp**.

Member Function Documentation

◆ add()

```
double
Calculator::add      ( double a,
                       double b ) const  inline
```

Adds two values.

Parameters

a First value.

b Second value.

Returns

Sum of the values.

Definition at line 17 of file **calculator.cpp**.

◆ multiply()

```
double
Calculator::multiply ( double a,
                       double b ) const inline
```

Multiplies two values.

Parameters

a First factor.

b Second factor.

Returns

Product of the values.

Definition at line 2 3 of file **calculator.cpp**.
