What Is LaTeX?

- A document preparation system built on TeX.
- Uses commands to organise and format content.
- Useful for technical reports and research papers.
- Supports equations, tables, and cross-references.

Document Workflow

Write the source, compile it, and inspect the PDF.

Examples from the Demonstration

Mathematics

$$\sum_{i=1}^{n} i = \frac{n(n+1)}{2}$$

$$A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$$

Document Features

- Sections and contents
- Coloured tables
- A workflow figure
- Labels and references

Conclusion

- LaTeX provides consistent document formatting.
- Beamer creates presentations using LaTeX.
- Source files remain editable and reusable.

Key Takeaway

Clear structure helps communicate technical ideas.

Thank you!
